

Home-Care 3G

Scheduling and Management System

Home-Care 3G

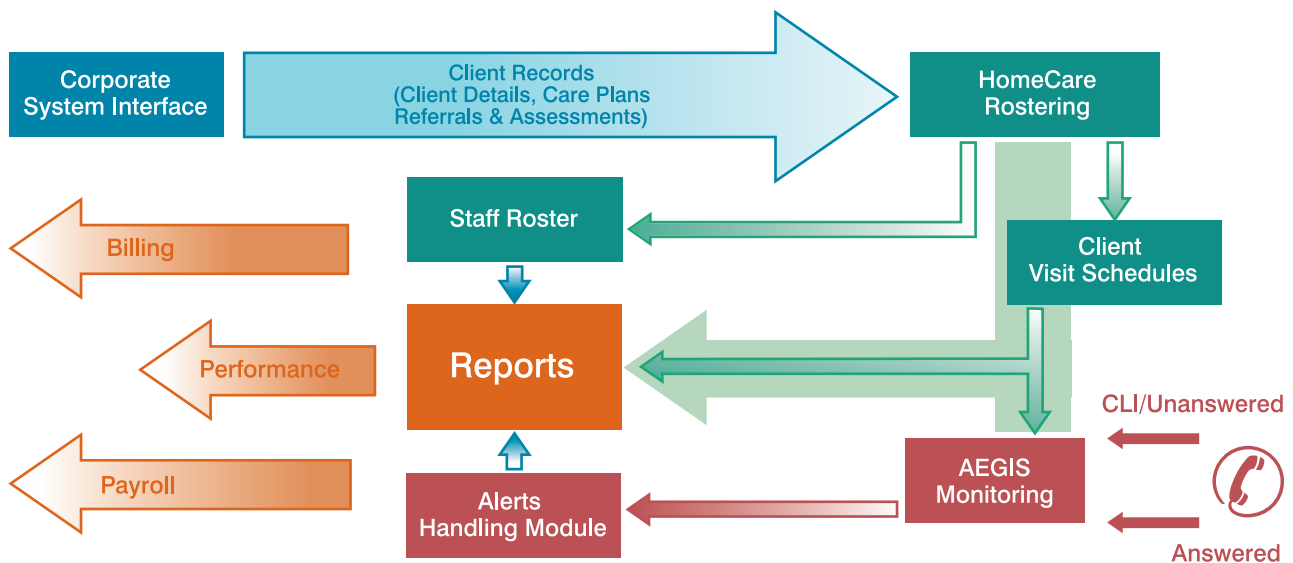

Scheduling and Management System

The Jontek Homecare 3G Care Scheduling System has been developed in response to customer requests for a cost-effective solution that gives greater flexibility, ease of use and improved reliability. The system has a powerful yet user friendly reporting facility which provides the vast array of reports necessary to run a High Quality and Efficient Homecare Service in an ever more demanding climate. Homecare 3G helps Care Providers meet the increasing demands of Government for accountability and provide extensive statistical and financial information on the range of Homecare Services they provide. Our software solutions not only meets today's needs but will also continue to evolve in line with client's growth in services and the demands of Government, thus ensuring that we meet your needs for the future.

AEGIS monitors the provision of care in real-time and provides extensive reporting to ensure that the client's care is being provided as planned and that any issues are highlighted early for immediate attention and remedial action.

We are able to offer our Homecare Scheduling and Monitoring systems fully integrated, stand-alone or integrated with your existing systems.

Jontek Total Solution

Meets the requirements of IT departments

Our Systems have been developed to comply with all of the current Government legislation for Homecare Providers, namely The National Care Standards, Fairer Charging Policies, CSCI, e-GIF (Government IT Web Standards) and the Electronic Social Care Records (ESCR).

Fully Web-enabled in line with the Government e-GIF Policies.

Allows greater integration between Social Services, Health and Housing, enabling information to be exchanged between their various databases.

Fully scalable, the Homecare 3G system has no practical limit to the number of sites or the number of users.

The application utilises SQL Server, is a Smart Client application, requires no installation and can be run as a desktop application or within a browser. It has a rich GUI and does not rely on having Citrix installed.

Home-Care 3G a cost-effective solution that gives greater flexibility, ease of use and improved reliability.

Home-Care 3G Features

Security Manager

The System has a powerful and flexible in-built security manager which allows it to be tailored to meet your needs, in terms of accessibility of information, covering a wide range of personnel with varying functions and requirements.

Auditing and Trace-ability

A powerful feature of the system is that it allows full auditing and trace-ability of all actions carried out. The audited information can then be reported on giving an overall understanding of how the system is being administered.

Reporting

Provides a wide range of management reports allowing detailed analysis of the provision of care.

The system will allow searching/filtering of any field on the database which then allows a series of filters to be applied to build up intelligent queries. This powerful feature allows the users to report on any aspect of their client's database and these 'bespoke reports' can then be saved for future use. In addition, all reports can be exported into a variety of formats Excel, MSWord, XML, PDF etc and then scheduled to be emailed on a regular basis to other departments.

Finance

Homecare 3G can export qualified information to allow accurate client invoicing, staff payroll and purchaser billing. The system can also interface to a wide variety of financial systems eg Sage, Pegasus etc.

Home-Care 3G Features

Data Management

The powerful SQL server database contain's records of all staff, clients and providers of care. The information is displayed in an easy to read, user friendly format, allowing the user quick and easy access to the data.

Client information

Each client record contains all the required personal details of the clients, their contacts, characteristics, doctor, medical notes, preferences, required services and Care Plan.

Staff information

Each staff member has a database record containing their important personal details, availability times (shift patterns), qualifications, training, services, preferences, absences and work roster.

Staff Scheduling

Using a variety of criteria e.g. staff availability, shift patterns, qualifications, location, client preferences etc. staff rosters can be created quickly and efficiently by precisely matching all the available care staff that meet a client's specific care needs.

Absence and temporary change management

'Ad-hoc' changes can be made to client visit schedules and staff rosters to allow for staff holidays, periods of sickness or specific changes in a clients' circumstances etc. Any problems with the planned provision of care is highlighted to the user and allows them to make the necessary changes using the powerful Wall Planner management tool.

Data Entry Wizards

The system makes extensive use of data entry Wizards ensuring information is entered in a consistent manner and allows for the minimum amount of data to be specified for each Wizard, e.g. staff, clients and their personal contacts etc ensuring good practice.

Gazetteer

The system utilises an in-built Gazetteer which makes the data entry of address information quick and accurate.

Communications Log, Document Management System

The system has an in-built document management system for managing letters, emails, faxes etc. All correspondence to/from the clients and their contacts is recorded by the system and the documents can be scanned and attached for future reference in line with the National Care Standards.

Photographs

In line with National Care Standards the clients' and staff photographs can be stored within their record.

Clients Multiple address

Clients can be linked to more than one address e.g Home, Respite Care, Hospital etc and the system can then keep track of their current address. Clients can be contacted regardless of their current address and their plans for going into respite care, returning home etc can be verified.

Clients' Characteristics & Preferences

These are user definable, stored within the client record and allows for the services provided to be tailored to the clients' particular needs and circumstances as required by the National Care Standards and Supporting People.
